

Linear and circular x-ray dichroism

Giorgio Rossi

Dipartimento di Fisica, Università di Modena e Reggio Emilia

Via Campi, 213/A - 41100 Modena (Italy)

Polarized X-rays probe chirality or magnetic order in solids in resonant absorption spectroscopy at threshold. The basics of the method are introduced and discussed with examples. The applications of XMCD to the atom-selective magnetometry in artificial heterostructures is discussed.
